**SYSTEM MECHANICAL COMPLETION CERTIFICATE
(MCC)**

PROJECT TITLE : CRUDE OIL TANK FARM(AGROOD AREA)

PROJECT No : 1251-100

SYSTEM NAME : Tank-04 cathodic protection system

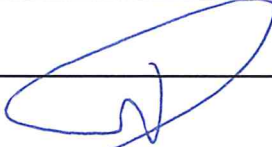

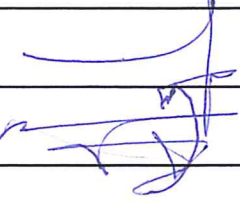

SYSTEM ID : 030-CP-005

THIS IS TO CERTIFY THAT:

- THE ABOVE SYSTEM HAS BEEN FABRICATED, ERECTED, INSTALLED AND TESTED TO THE REQUIREMENTS OF THE CONTRACT DRAWINGS, SPECIFICATIONS, THE APPLICABLE CODES AND STANDARDS.
- ALL PRE-COMMISSIONING RELEVANT ACTIVITIES, TESTS, INSPECTIONS AND CHECKS HAVE BEEN CARRIED OUT FOR THIS SYSTEM AND FOUND ACCEPTABLE.
- Q/C DOCUMENTATION OF THE ABOVE SYSTEM HAS BEEN AUDITED BY THE CUSTOMER SITE QUALITY CONTROL AND FOUND COMPLETED.
- ALL PUNCH LIST ITEMS CATEGORY (A) IN THIS SUBSYSTEM WERE CLEARED.
- THIS SYSTEM IS MECHANICALLY COMPLETED ON THE DATE 21/06/2021 AND READY FOR COMMISSIONING (RFC) WITH THE FOLLOWING EXCEPTIONS.

EXCEPTIONS :

NOTE: ACCEPTANCE OF THE ABOVE SYSTEM DOES NOT RELIEVE ENPPI/CONSTRUCTION CONTRACTOR FROM THEIR CONTRACTUAL OBLIGATIONS AND RESPONSIBILITIES.

COMPANY	PETROJET	ENPPI	PPC
NAME	Sabry Seleem	M. Abbasi	
TITLE	EST engineer		
SIGNATURE			
DATE	21-6-2021

NAME	Mosafa Ibrahim	M-Ibrahim
COMPANY	CONSORTIUM	PPC

READY FOR START UP CERTIFICATE

PROJECT TITLE : EGPC CRUDE OIL TANK FARMS PROJECT (AGROOD-020)

PROJECT No. : 1251-100

SYSTEM /AREA /PLANT : Tank-04 Cathodic Protection System

SYSTEM /AREA /PLANT No. : 030-CP-005

THIS IS TO CERTIFY THAT:

- THE MENTIONED SYSTEM /AREA /PLANT IS READY FOR START UP WHERE ALL MECHANICAL WORKS, PRECOMMISSIONING AND COMMISSIONING ACTIVITIES HAVE BEEN SUCCESSFULLY COMPLETED.
- MECHANICAL COMPLETION CERTIFICATE(S) FOR THE MENTIONED SYSTEM / AREA / PLANT HAVE BEEN SIGNED.
- ISSUANCE OF THIS READY FOR START UP CERTIFICATE(S) SHALL NOT RELIEVE CONTRACTOR(S) FROM THEIR OBLIGATIONS TO COMPLETE THE REMAINING SYSTEMS NOR FROM THEIR WARRANTY OBLIGATIONS AND OTHER PROVISIONS OF THE CONTRACT.
- THE FOLLOWING EXCEPTIONS AGREED TO BE CLEARED AFTER START UP AND WILL NOT PREVENT START UP ACTIVITIES.

EXCEPTIONS:

PROJECT: NEGATIVE CATHODIC PROTECTION FOR CRUDE OIL STORAGE TANKS

CLIENT: PETROJET

DESIGN: ENGR / ENGR

DATE: 14-06-2018

SCALE: 1/1

		Doc. no.:	CR35913 – 1101
Doc. Title:		1101 INSTALLATION INSTRUCTIONS FOR CATHODIC PROTECTION	
Page:		Rev. No.:	0
5 of 15			

Please refer to the project drawing "Doc number 1251-100-116-002-D99-005 External Cathodic Protection Permanent Reference Electrode Installation drawing for Fire Water Storage Tanks" for precise location / orientation of these pipes.

The slotted pipe will have a galvanized steel rope passed through entire length of the pipe as it is being assembled and terminated at each end to be used as a draw cord The rope is tied wrapped to the Portable Cu/CuSO4 reference electrode which in turn has a 120m cable tail to allow passage under the entire tank base. When not in use the cable tail / Galvanised steel wire should be safely coiled and stored in the monitoring pits provided.

The PVC is pipe is supplied in 3 to 5.8m lengths and is joined by M/F threaded connection. The geotextile sleeve is provided loose to be fitted during construction to prevent the backfill media from entering the slotted tube.

For the portable cell to operate successfully it is suggested to wrap in a wet sponge material creating an interference fit within the PVC tube.

Ensure the insulation of the cables is not damaged during the pulling of the cables.

The slotted monitoring pipe should be laid on a sand bank running across the tank base 150mm above the MMO Grid and then routed through the 4" conduit at plant east and west side of the ring beam.

5.2 MMO RIBBON & CONDUCTOR BAR

Please refer to:

Document Number 1251-100-116-02-XX-D99-022 External Cathodic Protection System Drawing For Crude Oil Storage Tank

Document Number 1251-100-116-002-D99-004 External Cathodic Protection System Drawing For Fire Water Storage Tank

For the successful operation of the Cathodic Protection system, it is imperative that the MMO Ribbon is installed at a uniform minimum depth of 600mm below the tank bottom.

The foundations of the tanks shall be constructed to the point where they would be at least 350 to 400mm (layer of soft sand) below the bottom of the tank. It must be noted that the MMO Ribbon anodes and conductor bar assembly MUST be placed above the membrane.

The membrane should be at 100mm below the proposed location of MMO ribbon grid. In addition, it is essential that the membrane shall cover the entire inner face of the concrete ring beam foundations to isolate the reinforcing rebar from the anode network. The Civil Contractor shall confirm the membrane is a uniform 700 mm depth below the proposed bottom of the tank, before proceeding further.

A 100mm layer of chloride free, clean washed sand shall be installed directly above the membrane, which shall be compacted according to the project standard and the anode shall be installed on this layer. The pattern of the anodes and conductor bar shall be as shown in the referenced drawings.

The anode ribbon shall be placed onto the sand layer in the pattern shown in the relevant design drawing, and then the Titanium conductor bars laid out. Where appropriate, the anodes shall be weighted down to avoid movement however, great care shall be taken to ensure that the coating of the anodes is not scratched or damaged in any way.

Grid style layout of anode ribbon and conductor bars

	Doc. no.:	CR35913 – II01	Rev. No.:	0
	Doc. Title:	II01 INSTALLATION INSTRUCTIONS FOR CATHODIC PROTECTION	Page:	8 of 15

The spot welder, provided shall be used for all welds and shall be operated in accordance with the manufacturer's Operation Manual by an experienced operative – see appendix 2 for operation instructions.

A sample test weld between the anode ribbon and conductor bar should first be carried out in order to ensure good quality welds. A pull test (by hand) to ensure the weld cannot be pulled apart. A resistance test between the welded element shall be carried to ensure the weld integrity. The acceptance criteria for the resistance between the welded elements shall be 0.1ohm using a calibrated multimeter.

MMO Ribbon anode spot welded to titanium conductor

The sample spot weld shall be inspected by a Cathodic Protection Engineer or other responsible authorised person.

Each weld carried shall be tested with a pull test (by hand) and have a resistance test carried out. The results shall be recorded. The settings on the spot welder unit should be also recorded.

The recommended setting is as follows:

- MMO ribbon anode to MMO ribbon anode: 2 seconds.
- MMO ribbon anode to Titanium conductor bar: 3 seconds
- Titanium conductor bar to Titanium conductor bar: 5 seconds

At each and every crossover of the anode ribbon with the conductor bar, the anode shall be resistance welded, (spot welded) to the conductor bar a minimum of twice. Where necessary, anodes and conductor bars shall be extended using the same procedure.

5.3 POWERFEED CONNECTORS

The power feed connection locations shall be identified as per the reference drawings.

Power feed connectors are factory connected to the 16mm² cable using a splice kit. The Conductor bar tail from the power feed cable encapsulation shall be connected to the conductor

Clarke® weld

SPOT WELDER

Models CSW6T & CSW13T

Part Nos. 6030005 & 6030010

0204

OPERATING & MAINTENANCE INSTRUCTIONS

FEATURES

Model CSW6T

This 230V 50Hz, portable Spot Welder is provided with an electronic timer which allows precise control of welding time. The control knob is arrowed in Fig. 1. Electrode pressure may be mechanically adjusted from 40 to 120kg, to spot weld low carbon sheet steel up to 1 + 1 mm in thickness.

Model CSW13T

The most important features of this 230V 50Hz Portable Spot Welder are controlled by a microprocessor, managed from the control panel, shown in Fig. 2. These features are:

1. Welding time, set according to the thickness of metal to be welded.

2. Changing selection for Welding thickness

3. Changing resistance welding machine operating mode...

Selecting 'PULSE' mode improves welding capacity on materials with high yield points or materials with protective coatings. The pulsation period is preset and does not require adjustment.

4. Electrode pressure may be mechanically adjusted from 40 to 120kg, to spot weld low carbon sheet steel up to 2 + 2 mm in thickness.

Both Models

- 120mm Electrode Arms and standard electrodes are provided.
- An eye bolt may be fitted to the machine (see your Clarke dealer), for use in supporting the machines weight when repetitive welds are required (see your Clarke dealer). **IMPORTANT!** When using the Eye Bolt, Take care **NOT** to screw it more than 8mm into the screw hole.

UNPACKING & PARTS IDENTIFICATION

Unpack and lay out the components, checking against the following list. Please report any damage which may have occurred during transit, to your CLARKE dealer immediately.

MIXED METAL OXIDE ANODES RIBBON TYPE POWER FEED CONNECTION KIT

DATASHEET 1.11

POWER FEED
CONNECTOR

APPLICATION : For power feed connections on under tank grid anode system. The power feed connector connects the DC current feeder cable to the Titanium Conductor Bar.

Anode Power Feed Connector comprises 12.7mm width x 0.9mm Thickness x 200mm length Titanium Conductor Bar spot welded to a 100mm length of 3mm dia Titanium Wire. Encapsulation to the DC feeder cable is made by an epoxy splice kit and line tap connector generally as detailed below

Quantity : 551 No (for Crude Oil Tanks)
Powerfeed Connectors supplied with 500m of 16mm² XLPE/PVC Cable Tail , Colour Red

Quantity : 77 No (for Fire Water Tanks)
Powerfeed Connectors supplied with 160m of 16mm² XLPE/PVC Cable Tail , Colour Red

PERMANENT COPPER / COPPER SULPHATE REFERENCE ELECTRODE

This permanent reference electrode is used to measure Cathodic Protection (CP) potentials on buried pipelines, storage tanks and other buried metallic structures to which CP has been applied. Can be used with a pipeline coupon that allows you to take an IR free potential reading without interruption of the CP system.

DATASHEET

CU/CUSO4 REFERENCE
ELECTRODE

STANDARD SPECIFICATION	
Electrolyte	Saturated Copper Sulphate Gel (98.4% Min Purity Cu/SO ₄ crystals)
Electrode Body Materials	High Temperature Fired Ceramic and Ion Trap.
Weight (Gross)	Approx 1Kg net weight
Dimensions	Approx 36mm Dia x 200mm (Bare Dimensions)
Cable	1c x 16mm ² XLPE/PVC stranded copper conductor cable, 600/1000V grade, black, 300m length For Crude Oil Tanks / 160m Long for Fire Water Tanks

Quantity : 783 No for Crude Oil Storage Tanks
42 No for Fire Water Tanks

170 Series Digital Multimeters

Versatile meters for field service or bench repair

These meters have the features needed to find most electrical, electro-mechanical and heating and ventilation problems. They are simple to use and have significant improvements over Fluke's original 70 Series like, True-RMS, more measurement functions, conformance to the latest safety standards, and a much larger display that's easier to view.

Features

True-RMS measurements		
Digital display counts, updates 4 times per second	6000	175
Display backlight	•	•
Analog bargraph / segments, updates 40 times per second	33-segments	33-segments
Auto and Manual ranging	•	•
Display Hold and AutoHOLD [®]	•	•
Min-Max-Average recording mode with Min/Max Alert	•	•
Temperature readings (bead thermocouple probe included)	•	•
Smoothing mode allows filtering of rapidly changing inputs	•	•
Audible continuity and diode test	•	•
Test lead alert	•	•
Unsafe voltage alert warns for voltages above 30V	•	•
Low battery indication	•	•
Ergonomic case with integrated holster	•	•
Easy battery and fuse exchange without opening the complete case	•	•
Selectable sleep mode preserves battery life	•	•

Specifications

CABLE

CABLE XLPE/PVC TYPE

BAC Corrosion Control Ltd supply a wide range of cables for Cathodic Protection systems.

We can advise you on the correct cable to use for your application and can cater for minimum order quantities, custom markings and insulation colour as required.

Our standard range of XLPE/PVC Cables are detailed as follows :

Quantity :
25,250m of 16mm² XLPE/PVC, Black
50,500m of 50mm² XLPE/PVC, Black

- **Insulation:** XLPE (Cross Linked Polyethylene) - Cross-linked polyethylene is a compound form of PE, which enhances the mechanical stability

- **Sheath:** PVC - is available in many compound forms but those used in cable manufacture are plasticized to allow extrusion techniques and subsequent flexibility. It has good ageing and mechanical properties. Can be supplied in Black or Red as standard.

- **Conductor:** Stranded or Solid Plain Annealed Copper.

- **Application:** Designed for use in cathodic protection systems. These cables are provided with PVC sheath for protection and are therefore suitable for external use and direct burial.

- **Technical Data:** Voltage: 600/1000V,

- **Temperature Range:** 20°C to +70°C

- **Relevant Standards:** Conductor: To BS6360 up to 35 mm²
To BS6346 above 50 mm²

- **Sizes and Dimensions**

All sizes and dimensions are approximate and for information only. BAC will confirm actual dimensions at time of order if required:

DISCIPLINE

ELECTRICAL

SHEET NO

1 OF 1

JOB DESCRIPTION

EXTERNAL CATHODIC PROTECTION SYSTEM FOR CRUDE OIL TANK

AREA DESCRIPTION

030-T-03

ITEM / TAG NO.

030-T-03-CP

DRAWING NO.

1251-100-116-02-XX-D99-022

LOCATION

AGROUD AREA - MODULE 01

NO.

INSPECTION

RESULT

ACCEPT

REJECT

N/A

1

Anode installation area free from metallic debris prior to installation and level

2

Anode visually inspected for damage prior to installation

3

MMO Ribbon installed as relevant drawing

4

Conductor Bar installed as relevant drawing

5

Continuity test shall be conducted between Conductor bar and MMO anode prior to backfilling

6

All spot welding at crossing locations visually inspected and checked

7

Power feed connectors installed at correct locations as relevant drawing

8

Power feed cables have no physical damage with sufficient slack cable to permit exit from ring beam and termination in junction box

9

Continuity test shall be conducted for all Power feed cables before and after backfilling.

10

No Interference or contact with the tank external surfaces

11

Cable routing

12

Carefully backfill sand over anode to required depth under the tank which is free from rocks, boulders and metallic debris

13

Output current measurement at power feed cables

14

Waste materials removed from site

RESULT

N/A.

REJECT

ACCEPT

RE visually inspected for damage and tested prior to installation

Location of reference electrode correct

Location of monitoring tube correct

Reference electrode - measure potential to a calibrated portable CSE RE immersed in fresh water along with the permanent RE to be tested. Potential difference shall be within $\pm 20mV$

Elevation of reference electrode (m) as relevant drawing

Monitoring tube installed straight and free from inside obstructions

Reference electrode quantity as relevant drawing

Reference electrode spacing

Carefully selected backfill installed around anode which is free from rocks, boulders and metallic debris

Structure-to-electrolyte potential recorded with the permanent reference electrode

Cables have no physical damage with sufficient slack cable to permit removal of terminated cables from terminals

Reinstatement completed and waste materials removed from site

CHECK LIST					
Transformer Rectifier Unit / Location			TEST / CHECK REPORT		
Rectifier Manufacturer			BAC		
Rectifier Type / Serial Number			OIL COOLD		
Rectifier Rating		AC Input	3 PHASE		
		DC Output	50 A /150 A		
All Cables (AC / DC) are properly terminated identified with proper tagging			OK		
Transformer Rectifier is properly grounded to the earthing system.			OK		
Oil Gauge, Silica Gel Breather & Fuse are properly fixed and secured without any damages.			OK		
T/R Unit is filled with suitable type of cooling oil at the required level.			OK		
Confirm TRU enclosure is earthed properly			OK
